

```
public class HelloWorld extends Application {  
    public void start(Stage primaryStage) {  
        Button btn = new Button();  
        btn.setText("Say 'Hello World'");  
        btn.setOnAction(new EventHandler() {  
            public void handle(ActionEvent event) {  
                System.out.println("Hello World!");  
            }  
        });  
        StackPane root = new StackPane();  
        root.getChildren().add(btn);  
        Scene scene = new Scene(root, 300, 250);  
        primaryStage.setTitle("Hello World!");  
        primaryStage.setScene(scene);  
        primaryStage.show();  
    }  
    public static void main(String[] args)  
    {  
        launch(args);  
    }  
}
```
